## Welcome

Thank you for purchasing our FDT network camera!

This user manual will help you become familiar with our camera in a very short time. Here you can find information about the camera's features and functions, as well as information to aid in troubleshooting. Before installation and operation, please read the below safeguards and warnings carefully.

If you still have further questions, please visit <a href="http://fdt.us">http://fdt.us</a> to get any supports from FDT team.

Email: <a href="mailto:support@fdt.us">support@fdt.us</a>
Visit: <a href="mailto:support@www.fdt.us/support">www.fdt.us/support</a>
USA Direct: **713-955-7170** 

# **Important Safeguards and Warnings**

In order to keep your camera secure and prevent unauthorized access, please make sure to follow the steps below:

- -Always make sure that your camera has the latest firmware as listed on <a href="http://fdt.us">http://fdt.us</a>.
- -Never use the default password for your camera. Always ensure that your password is at least 8-10 characters long and contains a combination of lowercase characters, uppercase characters as well as numbers.

# **Electrical Safety**

- All installations and operations here should conform to your local electrical safety codes
- We assume no liability or responsibility for any of the fires or electrical shocks caused by improper handling or installation.
- We are not liable for any problems caused by unauthorized modifications or attempted repair.
- Improper battery use may result in fire, explosion, or personal injury.
- When replacing the battery, please make sure you are using the same model.
- This product must be grounded to reduce the risk of electric shock.

# **Transportation Security**

Heavy stress, violent vibrations, and excess moisture should not occur during transportation, storage, and installation of the device.

## Installation

Handle the device with care. Keep the device right side up.

Do not apply power to the camera before completing installation.

Do not place objects on top of the camera.

## **Repair Professionals**

All the examination and repair work should be done by qualified service engineers.

We are not liable for any problems caused by unauthorized modifications or user-attempted repair.

## **Environment**

The camera should be kept in a cool, dry place away from direct sunlight, flammable materials, explosive substances, etc.

This product should be transported, stored, and used only in the specified environments as stated above.

Do not aim the camera at a strong light source, as it may cause overexposure of the picture, and may affect the longevity of the camera's sensors.

Ensure that the camera is in a well ventilated area to prevent overheating.

## **Operation and Maintenance**

Do not touch the camera sensor or lens directly.

To clean dust or dirt off of the lens, use an air blower or a microfiber cloth.

#### **Accessories**

Be sure to use only the accessories recommended by manufacturer.

Before installation, please open the package and check to ensure that all of the components are present.

Contact the retailer that you purchased from, or FDT directly if anything is broken or missing in the package.

## Check Hardware

When you receive the product in the packaging, unpack it, and check all sides of the product for any physical damage. The protective materials used in the packaging of the product can protect most accidental damage during transportation, but to ensure that your equipment is operating as expected, it is recommended to inspect the product before proceeding further.

On the product, check specifically that the label on the bottom of the product is not damaged. The serial number of the unit is often needed to provide support.

Please check that all required items for your camera are present and accounted for. If any item is missing, please contact us as soon as possible so we can send you the missing component.

Note: Hardware does not look exactly as pictured in this section, but the steps to

assemble the hardware are the same.

# 1 Features and Specifications

## 1.1 Overview

The FDT Camera is an excellent digital surveillance product that can be useful to a wide variety of users. The camera connects to any router, and uses an internet connection to allow the user to access all of its functionality from many internet connected devices. It's easy to use and can be set up in a relatively small amount of time. It has various functions such as recording, playback, and monitoring functionality.

The FDT IP camera connects to a wide variety of routers in order to connect to the internet, both through a wired connection and wirelessly. Once setup, the camera can be accessed remotely from a wide variety of internet connected devices, including PC, iPhone, iPad, Android tablet, and Android phone.

This Camera adopts a high-quality design in order to achieve high levels of reliability and security. It can be configured to work locally, as well as on a network. The Camera also has a built-in WiFi adapter that allows for the camera to be used on a wireless network, without needing a physical connection to a router or PC.

## 1.2 Features

The FDT Camera has the following features:

#### **HD Resolution**

FDT IP camera is an integrated wireless IP Camera with a color CMOS sensor which enable to view in High Definition resolution. It combines a high quality digital video camera, with a powerful web server, to bring clear video to your desktop and mobile devices no matter where by your local network or over the Internet.

#### **P2P** function

FDT cameras support P2P function. You don't need to do complicated Port Forwarding and DDNS settings, you just need to scan the QR code on the bottom of the camera to connect it to smart phone, or input the UID to realize remote access.

#### **H.264 Encoding**

FDT IP Camera provides users with more comprehensive controls over a monitored site. The camera supports H.264 video compression technology, dramatically reduces file size and saves network bandwidth.

#### Web access

FDT camera is designed for indoor surveillance with wide applications such as at home, in retail store and in office. Controlling the camera and managing images are simplified by using the provided web interface across the network in either wired or wireless way.

## Mobile device access

FDT IP camera provides Smart Phone APP for Android and iPhone device, please search and install App named **FDT View** on App Store and Google Play, then you can view your

camera anywhere, anytime on your smart mobile devices.

## **Advanced Playback Function**

FDT IP camera supports real-time recording and can support search, fast forwarded playback, recorded searches, and downloading of videos and screenshots. The Camera can also playback frame by frame as needed. When recording, the Camera shows a date/time overlay to ensure accurate viewing of events when they occurred.

Note: There may be slight differences in functionality due to the existence of different product series.

# 2 Device Overview

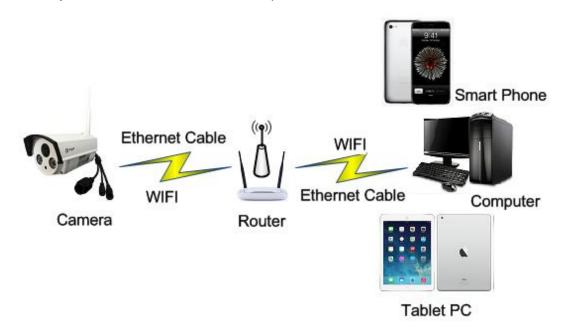

# 3 Camera Connection and Installation

To make your experience with the FDT WiFi camera easy and simple, we've provided multiple ways to set up, view, and operate your camera depending on your needs. Please set up your camera in the way that works best for you.

## 3.1 Connection Guide

The FDT camera can be accessed through the web browser in the computer or the App in the smart phone or tablet PC. Before accessing, you should connect the camera to the router by Ethernet cable or WIFI after it is powered on.

## 3.2 Installation Guide

The camera has a standard camera tripod screw hole (1/4-20 UNC thread) for use in mounting the camera onto a stable surface.

**Note**: Prior to installation ensure that the installation environment can support at least 3 times the weight of the camera.

# 3.3 Default Username and Password

To login to the system for the first time, use one of the following default username/password combinations. Once you've successfully logged in, it is highly recommended to change the password for security reasons.

**Username**: admin **Password**: admin

Note: Logging in for the first time will prompt the user to change the password to the admin account.

## 4 Access the camera

## 4.1 Mobile device access

FDT cameras enable access through the use of the FDT View app on either iOS or Android mobile operating systems. To access your device from a smart phone or tablet, please download and install **FDT View**. For iPhone and iPad users, please visit the App store to download the App. For Andriod user, please install the APP from the Google Play.

# 4.2 Web browser access

FDT camera can be accessed through the web browser from both windows OS and Mac OS. It supports the IE/Chrome/ Mozilla Firefox in windows OS and Safari/Chrome in Mas OS. The web browser accessing can supports all advance features of FDT camera.

### 4.2.1 SearchTool for Windows OS

To easily connect to the camera's interface, use the included CD to install and run the "SearchTool" in Windows. Alternatively, you can download the tool software from <a href="http://fdt.us">http://fdt.us</a>. However, before use the SearchTool to find the FDT camera, please ensure:

-The camera is connected to the Network via an Ethernet cable. You can skip this step if you have already set up the camera on WiFi using the FDT view App in your mobile device.

- -The camera and the PC are on the same local network.
- -Using the IE/Chrome/Mozilla Firefox in Windows OS, the Safari/Chrome in Mac OS.

You can also modify some network configurations, camera name of your camera through the SearchTool. Please ensure you have input the right username and password of the camera to let your modifications are valid.

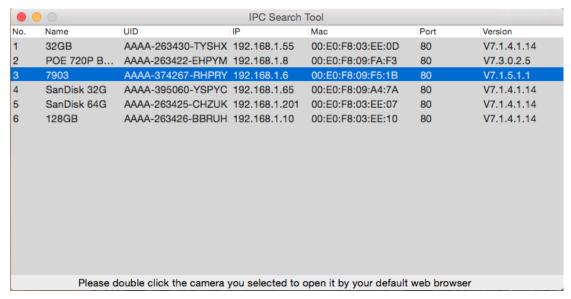

## 4.2.2 SearchTool for Mac OS

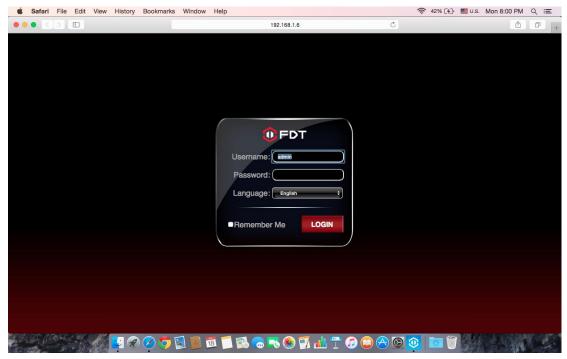

You can find the "FDT Mac SearchTool.zip" for Mac OS in the included mini CD. Please copy and install it on your Mac computer. Then run the tool named "SearchTool" to search the FDT camera in your LAN. From the tool, you can get the name, UID, IP address, Mac address, Http port and firmware version of the camera.

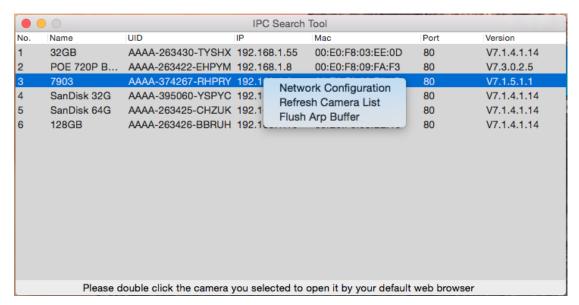

By double left clicking the camera in the searching list, you can open the camera by your default web browser, such as Safari.

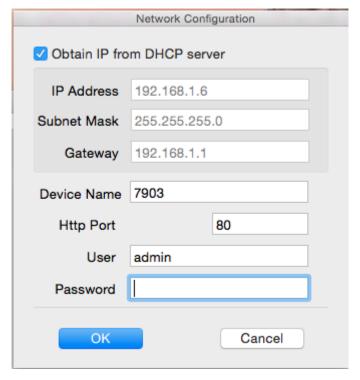

You can find the button "Refresh Camera List" and "Flush Arp Buffer" by right click the search tool or the camera in the searching list, then you can refresh the searching list by these 2 buttons.

Here is a "Network Configuration" button in the right-clicking button list. From this button, you can modify the IP, Device display name and http port of the FDT camera. Please note:

- 1. The camera will reboot automatically if you modify its http port.
- 2. Please enter the right username and password of your camera before you modify any network configuration of the camera.

## 4.2.3 Access by IP address and http port

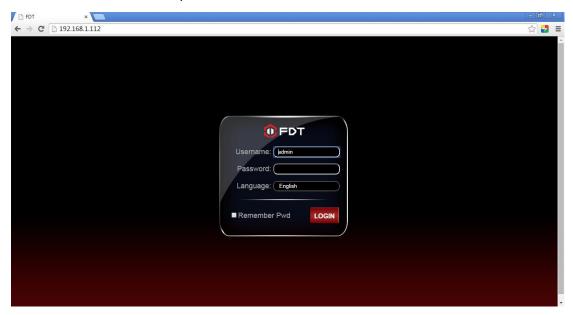

After launching the SearchTool, click the next to skip the welcome page and refresh the searching page to bring up the cameras on your LAN. Then you can double click the camera's line item to login the camera by your default web browser, or you can open the web browser you want first and input the IP address of the camera in the URL address bar of the browser by manual to login your camera. You can access the FDT camera by HTTP

protocols as below:

http://LAN IP Address + HTTP Port No.

You can find the LAN IP Address of your camera through the SearchTool. As for the HTTP Port No., the default port No. is 80.

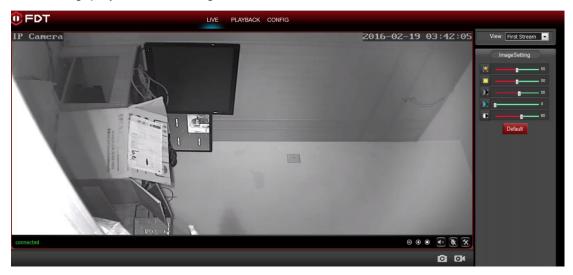

Log in to the camera using your login credentials (default username and password are both "admin"). If this is your first time logging into the camera by default account after it is reset, you will be prompted to change the default password. Please select a password that is at least 8 characters long, and one that uses a combination of uppercase letters, lowercase letters, and numbers.

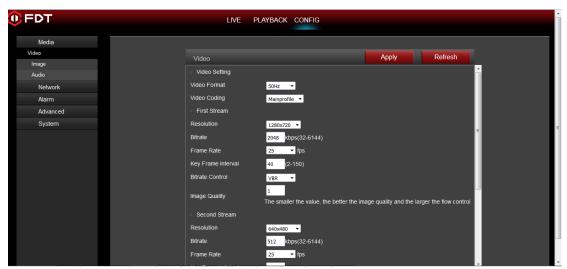

For the IE/ Mozilla Firefox web browser in Windows OS, when opening the camera's interface, the browser will prompt you to install a plugin. The plugins are necessary for using the camera's interface. Click install to download the plugin, and then install the plugin. If the browser prompts you to allow the plugin to work on the computer, hit Allow to ensure the plugin can run successfully. Then the camera is now successfully set up for

live viewing, playback and configuration!

**Note**: Due to the limitations of NPAPI plugins, the web browser of Chrome/Safari can not support the settings for features of playback, talk, motion-detection and privacy mask.

## 4.2.4 Remote access

You can access the FDT camera remotely through web browsers by UPnP/DDNS features or Port forwarding.

Go to the CONFIG/DDNS page to enable the UPnP and input the information for third-party DDNS, such as Dyndns.org/3322.org/dynddns.us/No-ip.com. Then you can access the FDT by DDNS remotely.

Go to your router settings page to make the appreciate port forwarding, then you can access your camera remotely through the public IP address and its corresponding port.

## 4.3 NVR access

FDT camera supports connecting to any NVR that uses the ONVIF standard. This allows the camera to view live, playback and to save recorded data to a network storage device.

#### 4.4 RTSP access

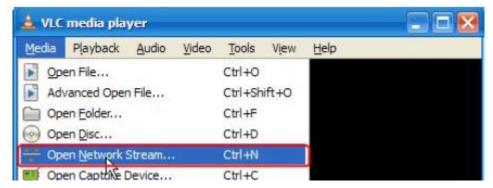

The FDT camera supports the RTSP standard protocol, you can access the video from the camera directly by RTSP player such as VLC. Please make sure you enable the RTSP feature of you camera, you can set this feature in the webUI of the camera through the web browsers, like IE/Firefox/Chrome in Windows OS computer, and Safari or Chrome in Mac OS computer.

#### **RTSP URL**

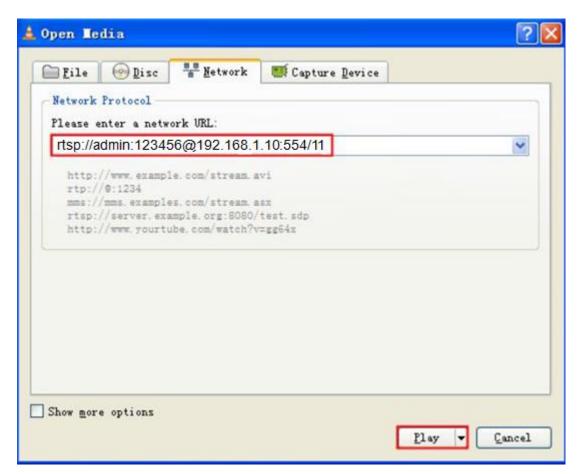

First stream: rtsp://username:password@IP:port/11
For example: rtsp://admin:123456@192.168.1.10:554/11
Second stream: rtsp://username:password@IP:port/12
For example: rtsp://admin:123456@192.168.1.10:554/12

Follow these steps to access the camera rtsp stream by VLC player:

1) Open the VLC player and go to "Media"/"Open Network Stream";

2) Enter the URL in VLC and click the play button.

3) You may need to go through the rtsp authentication if you did not input the username/password in your RTSP RUL.

4) Then you can view the video from the VLC player by now.

**Note**: you can also view the video remotely by the rtsp stream if you have the right DDNS or port mapping or forwarding.

# **5** App for Mobile Device

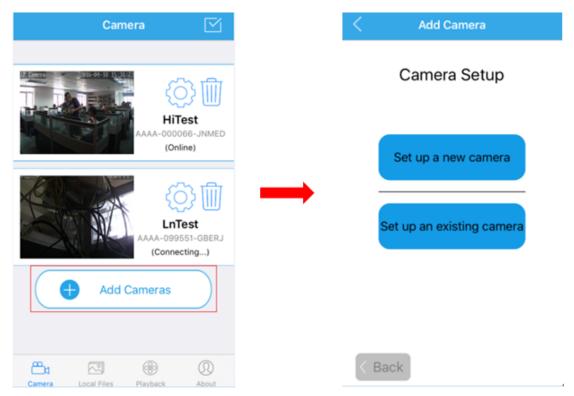

To access your device from a smart phone or tablet, please download and install **FDT View**. For iPhone and iPad users, please visit the App store to download the App. For Android user, please install the APP from the Google Play, or <a href="http://fdt.us">http://fdt.us</a>.

**Note**: For purposes of this guide, we will use iOS, though both apps have the same interface. The App Interface may differ slightly from the screenshots below as updates are released.

**Note**: If you have a dual band router, and your camera is not connecting to your WiFi network, please make sure you did not connect the FDT camera by 5G. It support 2.4G only.

## 5.1 Add Camera

You can go to the camera list page to find a "+ Add Camera" to add cameras into your App. There are 2 methods to add camera. The first one is "Set up a new camera", it is used to add camera which is just reset to factory setting or you just get the camera from the package. You can change the initial password of the camera and set wifi settings to your camera through this method. It is usually used for the first time you want to setup this camera. The second one is "Set up an existing camera", it means to add the camera you set up before, for example you have already set up your camera in another smartphone or web. For the second method, you can search and add the camera directly, no need to change the password or set the wifi configuration.

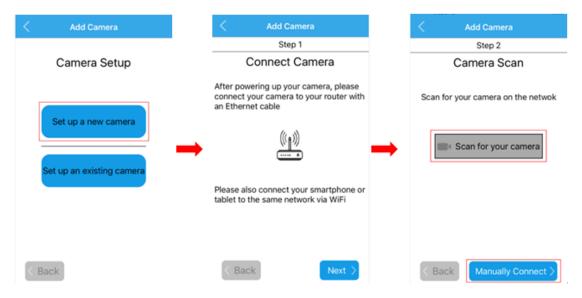

#### 5.1.1 Set up a new camera.

If you are the first time to set up the FDT camera, or your just reset your FDT camera. Please click the button "Set up a new camera" to add it into your smartphone or tablet.

Please powered up your camera first, and connect your camera to your router with an Ethernet cable. After you connect your smartphone or tablet to the same local network via wifi, then you can go to add your camera into the App by scanning the camera in the LAN or by inputting its UID by manual. We do recommend you to scan and add the camera in your local network, so you do not need to input the UID which is a long identifie and hard to remember.

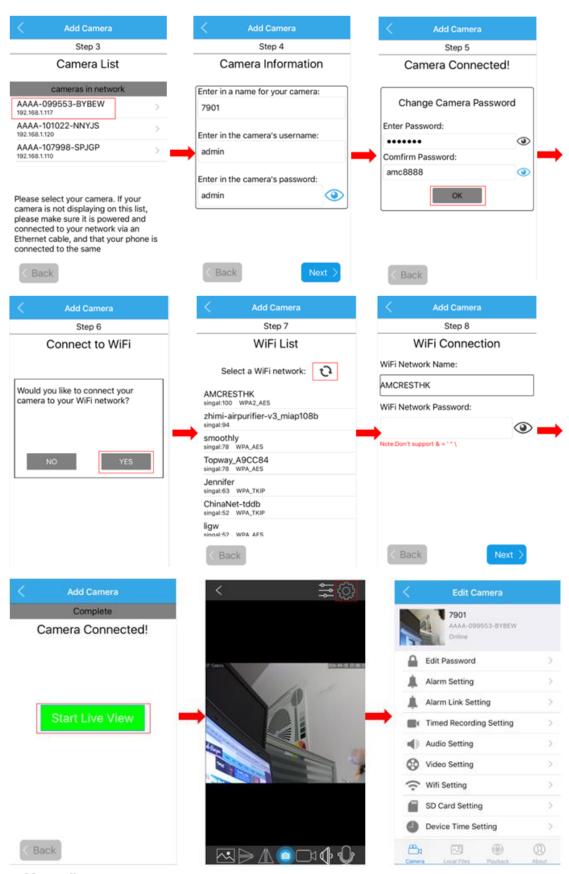

#### 1. Scan for your camera

Once you chosen to add the camera by scanning, you can follow the NEXT or text instructions to complete the process of adding camera. Here are the screenshots to show how to add the camera by scanning.

- -Select the camera you want to set up from the camera list you get by scanning.
- -Give your camera a name, and input right username and password to access it. The default username is admin, the default password is admin too.
- -Change the initial admin/admin username/password for the consideration of account security. Give your camera a private username and password that known only by you, and keep it secret.
- -If you want to configure the wifi in this set up process, you can choose YES to connect to your wifi, or you can choose NO to start the live view directly. You can also configure your wifi in the wifi setting page after you added the camera into your App if you do not want to configure it in this step.
- -Please click the refresh icon to search the wifi AP list again if you did not find the wifi SSID you want.
- -Please input the right password of your wifi, and click next to set it into your camera.
- -Then you can start live view of your camera and complete this set up process, and you can access and control your camera now.

## 2. Manually connect

Once you chosen to add the camera by manual, you can follow the NEXT or text instructions to complete the adding of camera. Here are the screenshots to show you this

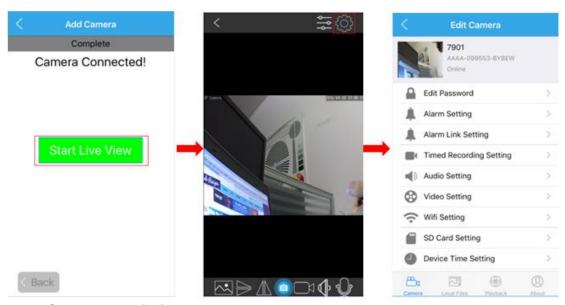

## process.

- -Enter in your camera's UID first, you can find it on the sticker of your camera's bottom or side. Give your camera a name, and input right username and password to access it. The default username is admin, the default password is admin too.
- -Change the initial admin/admin username/password for the consideration of account security. Give your camera a private username and password that known only by you, and keep it secret.
- -If you want to configure the wifi in this set up process, you can choose YES to connect to your wifi, or you can choose NO to start the live view directly. You can also configure your wifi in the wifi setting page after you added the camera into your App if you do not want to configure it in this step.
- -Please click the refresh icon to search the wifi AP list again if you did not find the wifi SSID you want.
- -Please input the right password of your wifi, and click next to set it into your camera.
- -Then you can start live view of your camera and complete this set up process, and you can access and control your camera now.

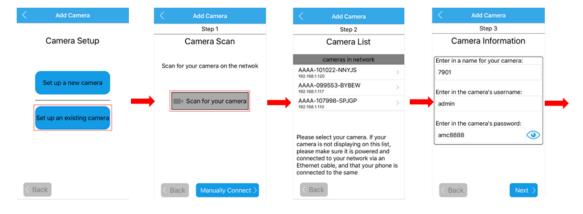

## 5.1.2 Set up an existing camera.

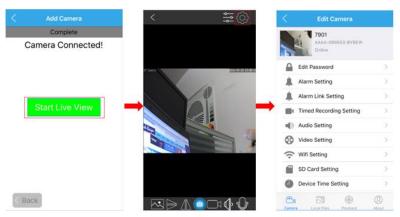

For the FDT camera you have set up before, you can click the button "**Set up an existing camera**" to add it into your smartphone or tablet. There are also 2 ways to add it, by scanning or by manual. We do recommend you to scan and add the camera in your local network area, so you do not need to input the UID which is a long identifie and hard to remember.

#### 1. Scan for your camera

- -After click the scanning button to search the FDT camera in your local network area, you can get a camera list. Please select the camera you want to set up.
- -Give you camera a name, and enter in its right username and password.
- -Then you can start the live view and go to the setting page to access or control it.

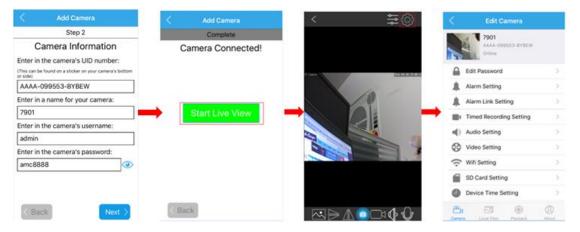

#### 2. Manually connect

If you want to add this existing camera to your smartphone or table by manual, please click the button "Manually Connect". Enter in your camera's UID, username and password, you can also give it a new name you like. Then you can start the live view and go to the setting page to access and control your camera.

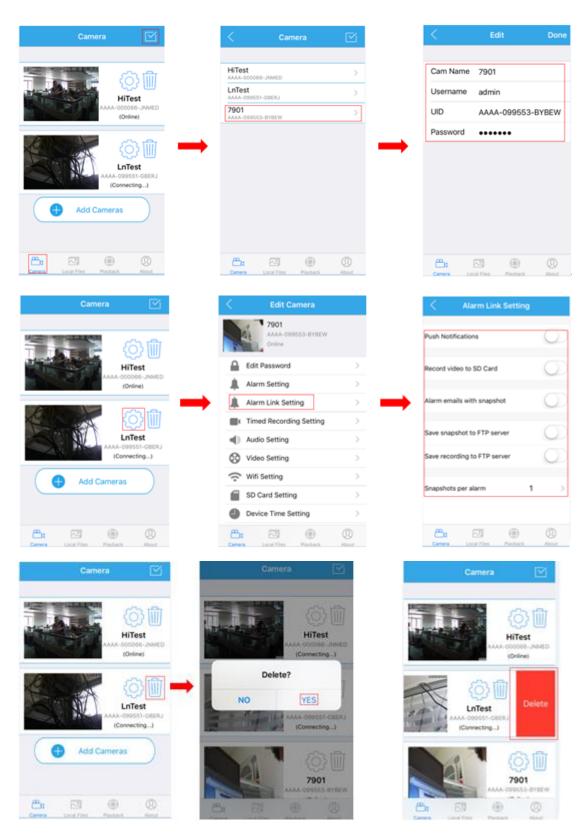

# 5.2 Camera list page

You can go to the camera page to check what cameras you have added. Here are a camera list, and you can also delete or edit the login information for the camera.

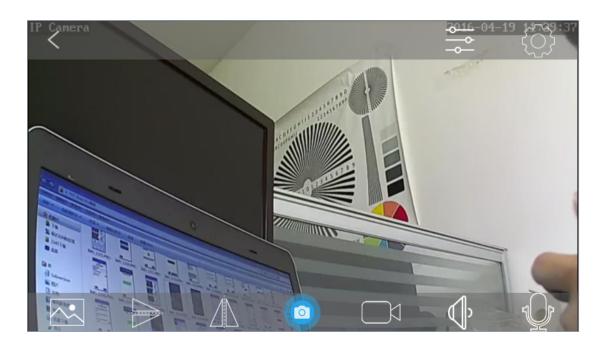

- -Click the edit icon to edit the camera login information. For example, you can change the camera's name in your smartphone or modify the camera's username and password if you could not login your camera, even the UID.
- -Click the tooling icon to enter the setting page, then you can edit all your camera's settings, include Edit Password, Alarm Setting, Alarm Link Setting, Timed Recording Setting, Audio Setting, Video Setting, Wifi Setting, SD Card Setting, Device Time Setting, Email Setting, FTP Setting, System Setting and Device Information. All of these settings will be explained in detail in next chapter.
- -Click the trash icon to delete the camera you want. You can also delete the camera you want by sliding the camera from right to left, then you can find a Delete button to delete this camera.

# 5.3 Live view page

After add the camera successfully, you can preview the video of your camera and set the configurations you want. This section will show you what the icons can do in the live view page of the FDT View.

-The **resolution** (HD/SD or High/Low)

The HD standards for the first/main stream of the camera, it is 720P as default. The SD means second/sub stream of the camera, it is VGA as default. You can also change the default settings as you want in the setting pages.

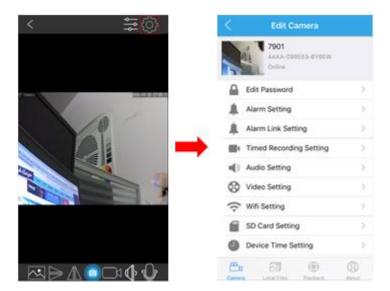

- -Flip the Viewo ;
- -Mirror the Video
- -Snap picture from the video and save it to your phone
- -Record video by manual from the video and save it to your phone;
- -Audio from the camera
- **-Talking** to the camera ; By press and holding this icon, you can hear the voice from the camera or the audio out port by connecting an earphone.
- -Set the **video parameters** of your camera, such as bright/contrast/saturation. And control the **LED status** of your camera by the icons of the model, such as auto/night

vision/day vision.

- -Exit  $\[ \]$  , you can go back to the device list page by click the back icon .
- -Settings page, you can go to the settings page by click the icon of settings.

# 5.4 Settings pages

#### 5.4.1 Edit Password

You can change the password of the FDT camera in this page.

## 5.4.2 Alarm Settings

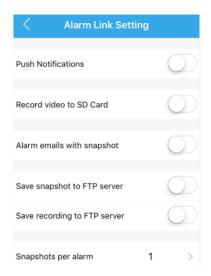

You can set the configuration about motion-detection alarm of the camera in this page, such as enable or disable the alarm, set the sensitivity of the motion-detection like low/medium/high.

## 5.4.3 Alarm link settings

You can enable the linked actions once the alarm is triggered in this page, include the Push Notifications to your smartphone, record video to the SD Card, alarm emails with snapshot, save snapshot or recording to FTP server, and the count for the snapshot.

## 5.4.4 Timed recording settings

You can set the scheduled recording settings in this page, include the recording length.

## 5.4.5 Audio settings

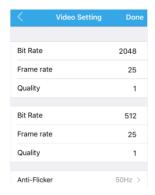

You can set the configurations for audio in this page.

## 5.4.6 Video settings

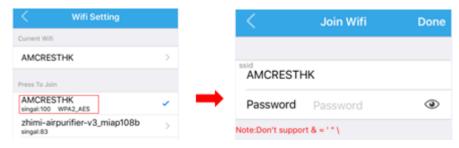

You can set the configuration about video encoding for the first/second stream in this page, like bitrate/frame rate and video quality. The top on is for first stream, the second one is for second stream.

## 5.4.7 Wifi settings

You can search the wifi in the LAN and set it to your camera in this page.

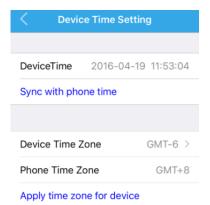

# 5.4.8 SD Card settings

You can get the space information about the SD Card in your camera and format it in this page.

## 5.4.9 Device time settings

You can set the time of your camera to sync it with your smartphone in this page.

## 5.4.10 Email settings

You can set the email information in this page to enable the email alarm actions. Here is a test button for you to check the connection of the email settings, please save your settings and test it before you complete the email settings to make sure your email setting will work successfully.

## 5.4.11 FTP settings

You can set the FTP account information for the video recording or alarm linked actions in this page.

## 5.4.12 System settings

You can reboot, restore the camera in this page. And there is an icon "Version checking" for you to check the latest firmware for the camera and upgrade it online.

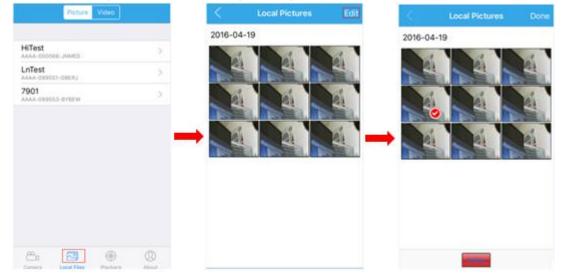

## **5.4.13 Device information**

You can obtain the information about the camera in this page.

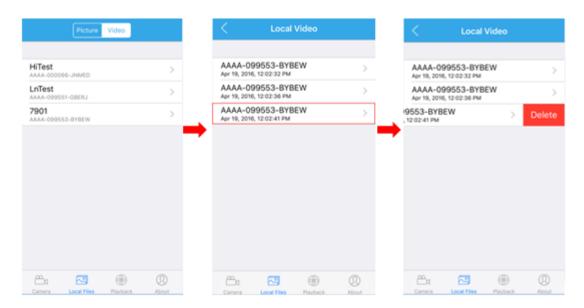

# 5.5 Local files page

You can browse the pictures and videos saved in your smart phone in this page by clicking the chosen file. And you can delete these files if you want. For the video file you can delete by sliding the file you choosing from right to left.

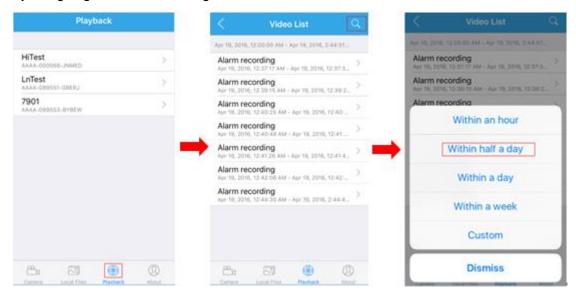

# 5.6 Playback page

You can browse the recording stored in the SD Card of the camera in the playback page and playback it remotely by click the video file from the list. And you can also filter the files by assigning an exact recording time.

# 6 Web User Interface for operation

Here details the FDT camera's user interface for web browser, as well as all of the operations the camera can perform, including the Login, LIVE, PLAYBACK and CONFIG pages.

# 6.1 Login page
